RIWAYAT PENDIDIKAN PERGURUAN TINGGI

Tahun Lulus	Program Pendidikan	Perguruan Tinggi	Jurusan/Program Studi
2020	Doctor	Hiroshima University	Engineering/ Learning Engineering
2009	Magister	Gunadarma University	Manajemen Sistem Informasi/ Rekayasa Perangkat Lunak
2006	Sarjana	STMIK PPKIA Pradnya Paramitha	Teknik Informatika

STARTER KIT : POTENTIAL PROBLEM

- Should Our Research have a “Massive” impact?
- Should Our Research have to be beyond imagination?
- What should I do?
- How to start?
- How many people needed?
- What kind of knowledge should I have

STARTER KIT : WHAT

- Definisi riset :
- *“Scientific research is a systematic, controlled empirical and critical investigation of propositions about the presumed relationship about various phenomena” (Kerlinger ,1986)*
- *“Research is all about addressing an issue or asking and answering a question or solving problem” (Hopkins WG, 2002)*

STARTER KIT : WHAT

- Kategori Riset :
- *Basic research*
Penelitian dasar mengembangkan suatu teori atau konsep dalam bidang tertentu, dan
- *Applied research*
Penelitian terapan berkaitan dengan suatu penerapan teori untuk mendapatkan perbandingan, hasil kinerja atau menghasilkan suatu produk yang membantu manusia.

STARTER KIT : WHAT – BASIC RESEARCH

- **Basic Research** juga meliputi pengembangan, pengujian, verifikasi dan memperjelas metode riset, prosedur, teknik dan alat yang membentuk metodologi riset itu sendiri.
- **Contoh jenis riset murni**
 - Pengembangan suatu teknik sampling yang dapat diaplikasikan pada suatu situasi yang khusus maupun spesifik
 - Pengembangan suatu metode untuk mengukur ekspresi pada orang

STARTER KIT : WHAT – APPLIED RESEARCH

- Riset terapan adalah riset yang teknik, prosedur dan metodenya diaplikasikan pada pengumpulan informasi tentang berbagai aspek suatu situasi, isu, permasalahan atau fenomena sehingga informasi yang terkumpul dapat digunakan atau diaplikasikan.
- Hampir semua riset dibidang ilmu sosial adalah riset terapan, karena dari pemahaman tentang fenomena yang dihasilkan dari melakukan riset, dapat diterapkan pada formulasi kebijakan (policy) dan administrasi.

STARTER KIT : WHAT – OBJEKTIF DARI RISET

- Sesuai dengan perspektif objektif dari riset, maka riset dapat dibedakan menjadi empat kategori riset, yaitu riset :
 - Descriptive,
 - Exploratory,
 - Corelational dan
 - Explanatory

STARTER KIT : WHAT – RISET DESCRIPTIVE

- Riset Descriptive adalah studi yang berusaha untuk menjelaskan secara sistematis suatu situasi, permasalahan, fenomena, pelayanan atau program, atau memberikan informasi tentang kondisi kehidupan suatu komunitas, atau menjelaskan sikap (attitude) yang diakibatkan oleh suatu isu dan sebagainya.
- Misal studi tentang: “Bagaimana Perilaku siswa Setelah penerapan kurikulum K13”

STARTER KIT : WHAT – RISET EXPLORATORY

- Riset Exploratory adalah studi untuk melakukan investigasi/ penyelidikan sebuah permasalahan yang belum terdefinisikan dengan jelas. Riset ini bertujuan untuk memberikan pemahaman mendalam terhadap permasalahan/ fenomena saat ini tetapi tidak akan memberikan hasil yang pasti.
- Misal Kenapa siswa yang bekerja secara berkelompok memiliki kecenderungan untuk terdapatnya siswa “*free ride*”.

STARTER KIT : WHAT – RISET EXPLANATORY

- Riset Explanatory adalah riset yang berusaha untuk menjelaskan mengapa dan bagaimana adanya hubungan antara dua aspek dari suatu situasi atau fenomena.
- Contoh ; studi untuk menjelaskan mengapa pada topografi yang miring mengakibatkan banyak terjadi longsor.

STARTER KIT : WHAT – RISET CORRELATIONAL

- Riset Correlational adalah studi untuk menemukan atau menetapkan adanya suatu relationship/association/interdependence antara dua atau lebih aspek dari suatu situasi.
- Misal apakah pengaruh media pembelajaran dapat meningkatkan performa belajar siswa.

CREATING A GOOD SCAFFOLDING

- Kerangka Riset
 - Research Background
 - Related Study
 - Experimental setting and Measurements
 - Conclusion

KERANGKA RISET : RESEARCH BACKGROUND

- Apa saja yang tertuang didalam Research Background?
 - Cerita mengenai Latar belakang riset yang harus saling memiliki benang merah / keterkaitan antar paragraph dengan pola Top – down
 - Metode dan Riset-riset terdahulu secara narasi
 - Hipotesa / Asumsi yang kita angkat
 - Research Question

MEMBANGUN CERITA/ NARASI TOP - DOWN

- Contoh : Aplikasi pembelajaran Bahasa Inggris di materi Reading Comprehension dengan menggunakan metode Toulmin arguments untuk mahasiswa EFL.
- Maka, kita bisa susun kerangka sebagai berikut :
 - Bahasa Inggris secara general dan permasalahan yang ada
 - Reading in English for EFL, focus on Reading and its problem
 - Reading comprehension detail activity and specific problem.
 - Method used for improving Reading Comprehension : Strategi Grafis
 - Toulmin Arguments as one of Graphical Strategy and it's used from several researcher
 - Hipotesa dan Research Question

KERANGKA RISET : RELATED STUDY

- Main key aspect is : Read a lot of research publication
- Dari contoh diatas, maka ada 2 subjek besar, yaitu, Reading Comprehension in English as EFL dan Media pembelajaran untuk Bahasa Inggris
- Kombinasi antara dua disiplin ilmu Metode Belajar dan Aplikasi Pembelajaran
- Jabaran mengenai riset-riset terdahulu dan pembeda dengan riset kita

HOW TO FILLING OUT THE GAP?

- We need to conduct a collaborative research!, or
- Follow other researcher's step and material to be used in our research

KERANGKA RISET : EXPERIMENTAL SETTING AND MEASUREMENT

- Definisi mengenai tahapan-tahapan experiment yang akan kita lakukan dan bagaimana kita akan mengukur eksperimen tersebut. Pastikan, setiap eksperimen yang dilakukan sesuai dengan Research Question.

KERANGKA RISET : EXPERIMENTAL SETTING AND MEASUREMENT

- Measurement :
- Qualitative VS Quantitative
- Qualitative : Deskripsi tentang situasi yang terobservasi dari kondisi kehidupan komunitas, atau bagaimana opini/pendapat masyarakat terhadap suatu isu.
- Quantitative : Jika informasi yang diperoleh dari studi tentang fenomena, situasi, permasalahan atau isu dibentuk utamanya dalam variabel-variabel quantitative dan jika analisa dimunculkan dalam magnitude dari variasinya. Menggunakan pendekatan statistic dalam pengukurannya.

KERANGKA RISET : CONCLUSION

- Bagian ini merupakan bagian terpenting untuk menjabarkan hasil eksperimen terhadap pertanyaan riset. Setiap pertanyaan riset, dijabarkan hasilnya berdasarkan temuan yang didapatkan saat eksperimen dan dikaitkan dengan riset – riset sebelumnya untuk membentuk suatu kontribusi baru.

PROCESS

Learning Method

Technology

Technology Enhanced Learning

TEACHING

- Teaching is best positioned as a design science, because it requires creative and scientific thinking in order to solve ill structured problems
- Design thinking capabilities are inherently challenging to develop, but are supported through sustained practice, reflection, exemplars, and expert guidance.

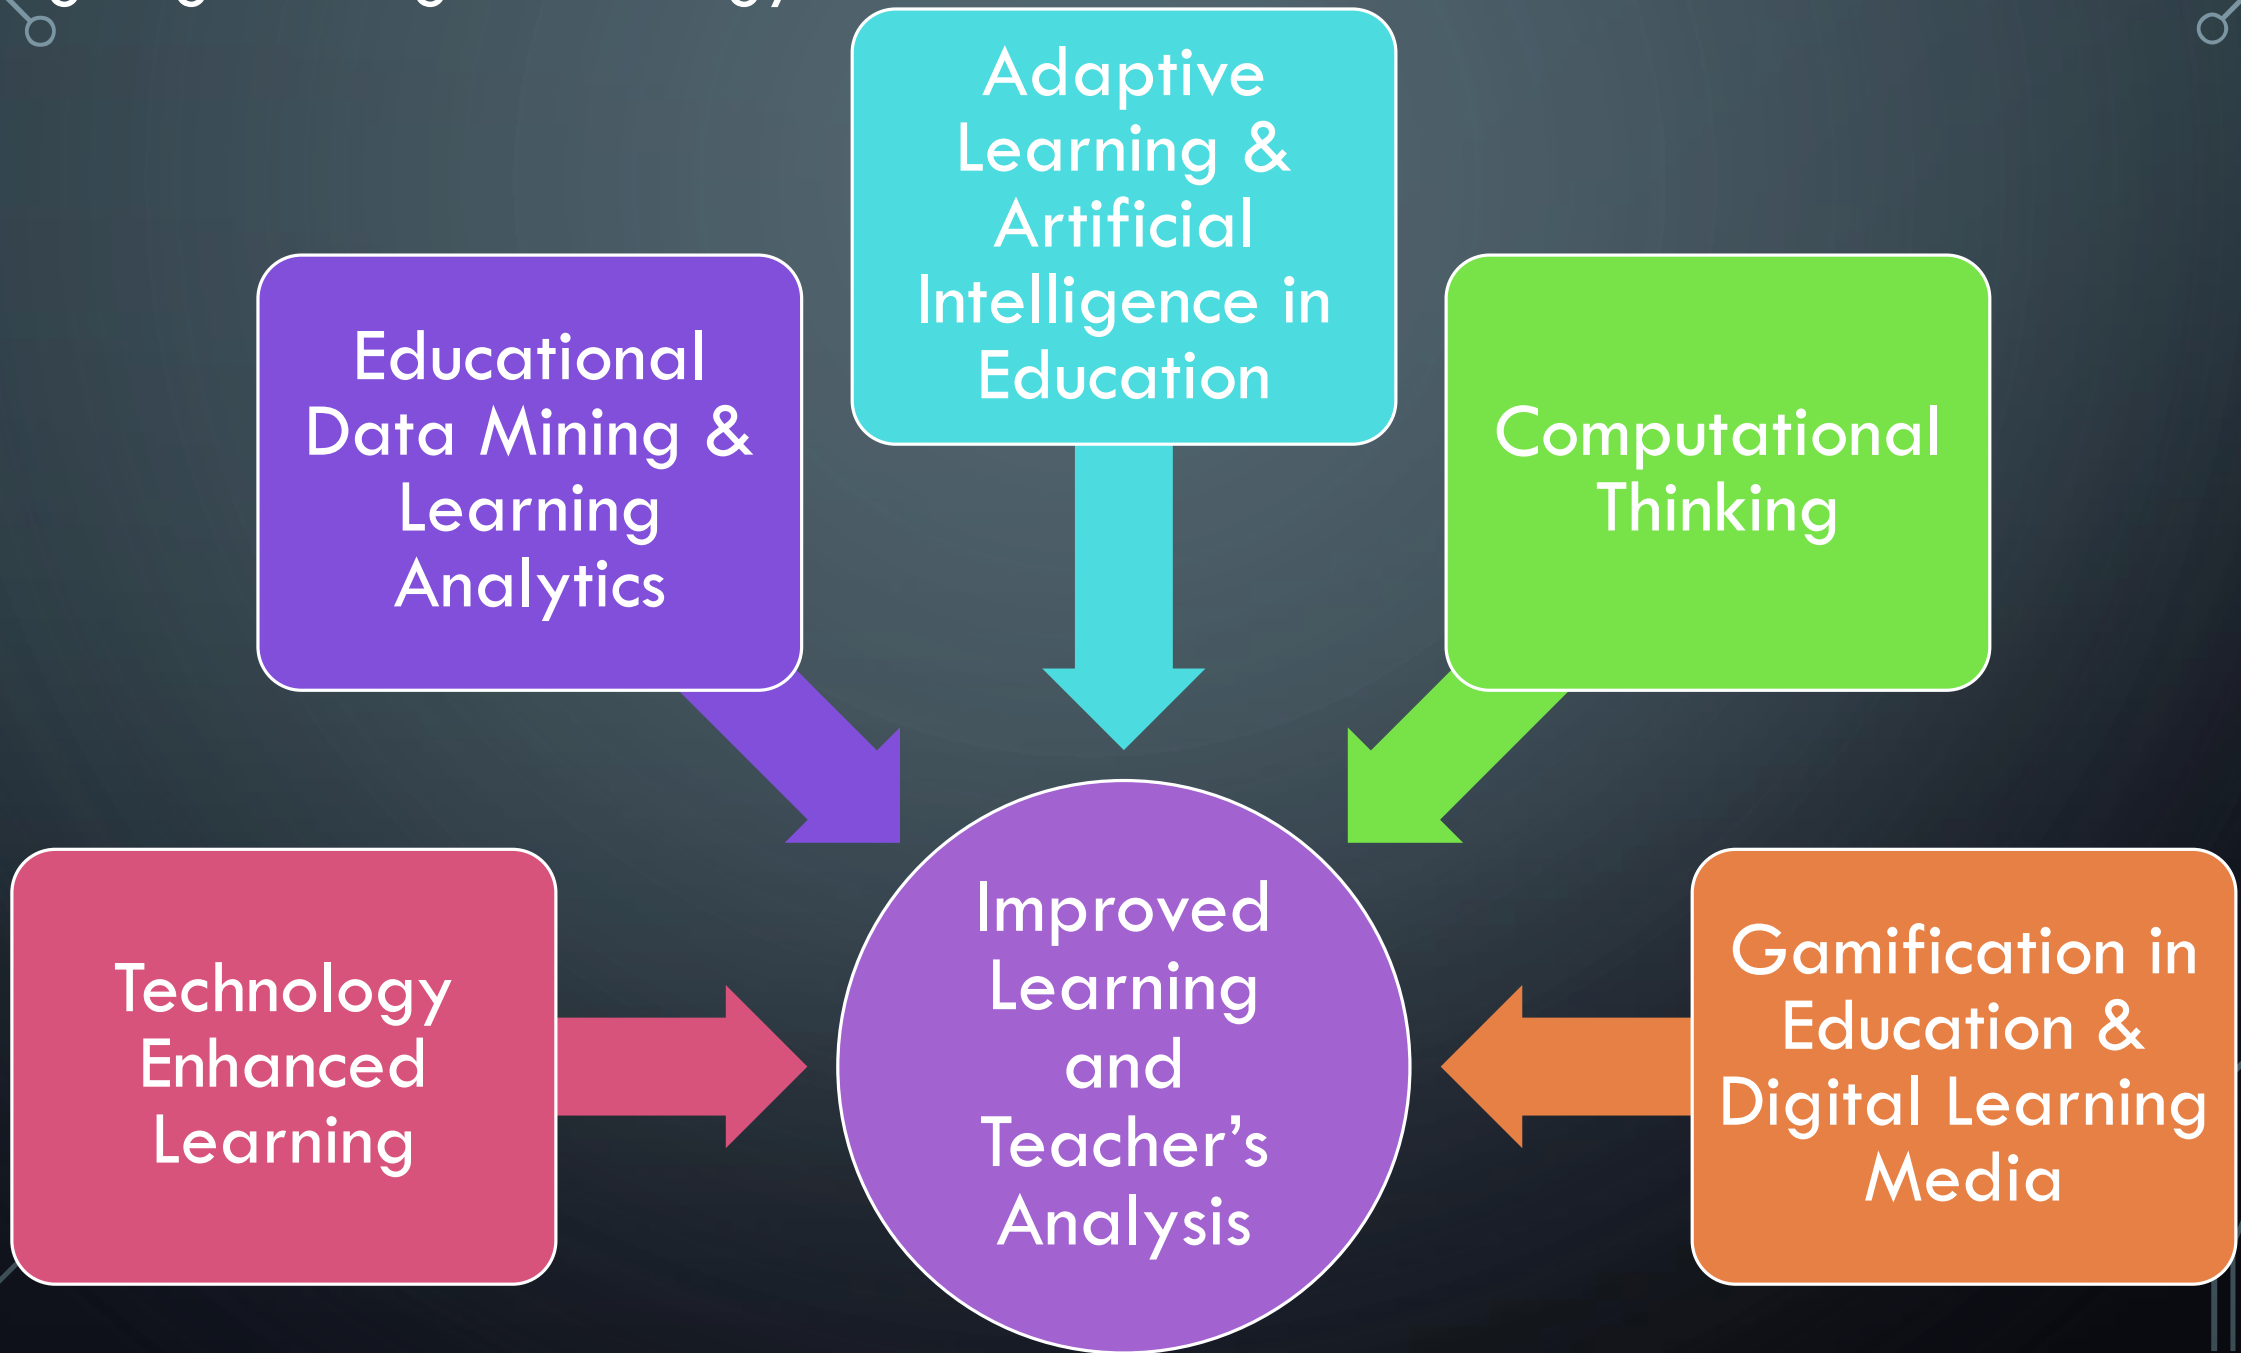

- “Fundamentally, designing for learning involves understanding and catering to students, creating tasks that help students achieve learning outcomes, ensuring alignment between different aspects of the design, and promoting accessibility”

Learning Engineering Technology Research Area

Technology Enhanced Learning

- The use of **technology** to maximise the student **learning** experience

Educational Data Mining & Learning Analytics

- an emerging interdisciplinary research area that deals with the development of methods to explore data originating in an educational context
- EDM uses computational approaches to analyze educational data in order to study educational questions

Gamification in Education & Digital Learning Media

- a developing approach for increasing learners' motivation and engagement by incorporating game design elements in educational environments.

Computational Thinking

- **Computational thinking** means **thinking** or solving problems like computer scientists. CT refers to thought processes required in understanding problems and formulating solutions.

Adaptive Learning & Artificial Intelligence in Education

- Global adoption of technology in education is transforming the way we teach and learn. Artificial Intelligence is one of the disruptive techniques to customize the experience of different learning groups, teachers, and tutors.

The logo features a central black rounded rectangle with the text 'KB-MAP' in white. On either side of the rectangle, there are stylized circuit traces in a light gray color, consisting of lines and small circles that resemble electronic components or nodes.

KB-MAP

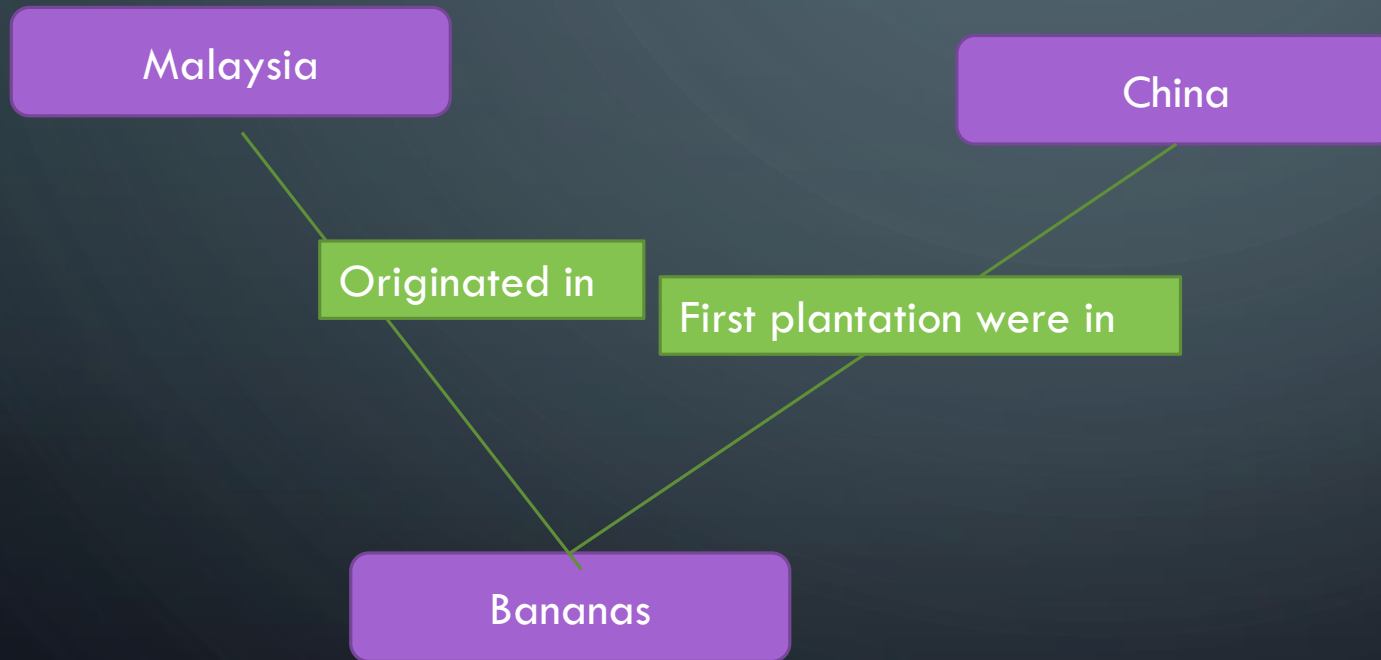

The background is a dark blue gradient with a large, faint circular pattern in the center. The corners are decorated with white circuit-like lines and nodes. The text is centered in the lower half of the image.

HOW IS KB-MAP WORKS?

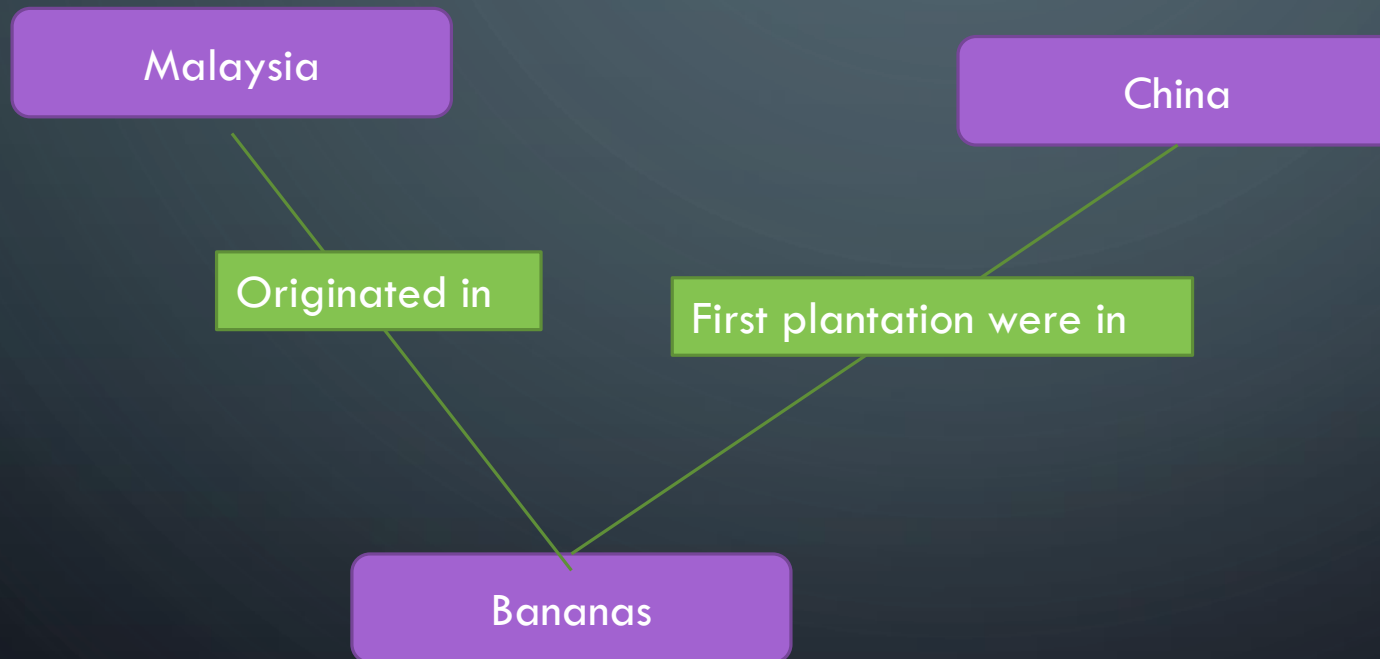

“Any substance may exist as solid, liquid or gas. If a solid is heated, it will melt to become a liquid. This is called melting. If the liquid is then cooled, it will freeze to become a solid again. This is called freezing. Similarly, if a liquid is heated it will boil to become a gas. This is called boiling.....”

Bananas originated in Malaysia as early as 2000 BC, but first banana plantations were established in China around 200 AC. In the early 1500s, the Portuguese and Spanish introduced bananas to the Caribbean and Americas. The United Fruit Company, formed in 1899, was responsible for the commercialization

MY RESEARCH WITH KB-MAP

METHOD : ANAGRAM DISTANCE (AD)

Anagram Distance is used to measure the sentence by sentence style, where learners are bound to the sequence appearance order of the text.

Example : Learners constructed the A proposition then B proposition, according to the reading material those construction were the 1st and the 3rd proposition.

This also indicate that user try to complete the paragraph by constructing the proposition from the same paragraph.

Expected	1	2	3	4	5
Result	1	3			
Distance	0	1			

Computer data storage

1 Computer data storage, often called storage or memory, **2** is a technology consisting of computer components and recording media used to retain digital data. It is a core function and fundamental component of computers.

3 In contemporary usage of the words "memory" and "storage", "memory" is usually semiconductor storage read-write random-access memory, typically DRAM (Dynamic-RAM) or other forms of fast but temporary storage. "Storage" consists of storage devices and their media not directly accessible by the CPU, typically hard disk drives, optical disc drives, and other devices slower than RAM but they are non-volatile. Historically, memory has been called core, main memory, real storage or internal memory while storage devices have been referred to as secondary storage, external memory or auxiliary/peripheral storage.

- 1 Small businesses and individuals choose to save data in a more traditional way. External drives, disks and magnetic tapes are very popular data storage solutions. USB or flash memories, DVDs and hard disks are cheap and widely accessible solutions.
- 2 These methods are very practical with small volume of data storage and backups.
- 3 However, they are not very reliable and do not protect the user in case of a disaster.

METHOD : PARAGRAPH REMAINING (PR)

- Structure of the text is Important in Reading Comprehension.
- Paragraph remaining (PR) is used to measure Learners' Construction **from a text Structure point of View**. This value measures how much a learner constructing the propositions within the same paragraph continuously.

Small businesses and individuals choose to save data in a more traditional way. External drives, disks and magnetic tapes are very popular data storage solutions. USB or flash memories, DVDs and hard disks are cheap and widely accessible solutions.

These methods are very practical with small volume of data storage and backups. However, they are not very reliable and do not protect the user in case of a disaster.

EXPERIMENTAL SETTING AND METHOD

- PROCEDURE
- This experiment involving eight Japanese undergraduate students who learn English as foreign language.
- The student divided into two groups by the TOEIC reading score and they use Kit Build (KB) and Scratch Build (SB) by turn.
- We conduct six session with a different material for each session

- 
- In each session we do several activities, they are:
 - Reading the material session with Dictionary and translator allowed (10 minutes)
 - Constructing KB Map and SB Map session with open reading material (10 Minutes)
 - Test session with closed reading material, dictionary and translator (5 minutes)
 - Test explanation session (10 minutes)

EXPERIMENTAL RESULT AND DISCUSSION

RESULT of Anagram Distance

Type	Mean (SD)	p-value
KB	0.47 (0.088)	0.049
SB	0.33 (0.15)	

1. This means learners with KB tend to construct concept maps not according to the order of sentences in the text (AD is High)
2. If just anagram distance is high also means that learners may randomly pick up sentences from the texts and make propositions.

Analysis RESULT of Paragraph Remaining

Type	Mean (SD)	p-value
KB	0.72 (0.14)	0.20
SB	0.81 (0.13)	

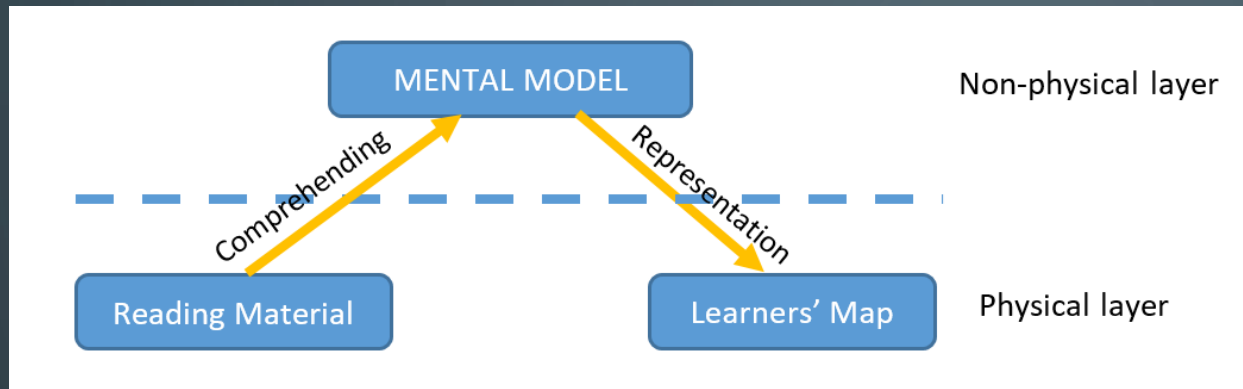

PR both in KB and SB is high, 0.7 - 0.8. This means learners make propositions in the same paragraph in the possibility of 70 – 80%.

The background is a dark blue gradient with a large, faint, light blue circle in the center. The corners are decorated with white, stylized circuit board traces and nodes. The text is centered in the upper half of the image.

RESEARCH 2 : LEARNING SUPPORT FUNCTION IN KB-MAP

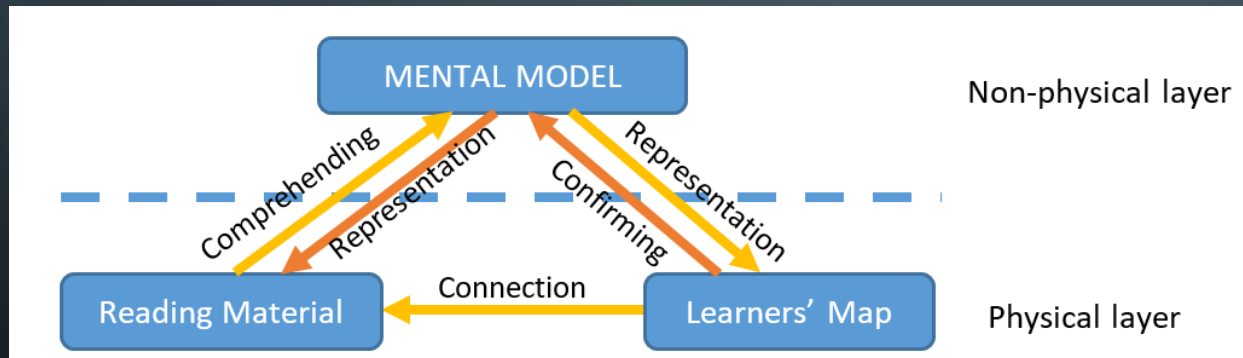

SOURCE-CONNECTION STRATEGY

- This function aims to facilitate learners to make confirmation of their understanding (in the form of learners' map) with the reading material.

Learner's thinking in usual KB-map

	Good Reader	Poor Reader
Construction process	Confirming the understanding by them self by clarifying with the reading material	X
After Construction	Teacher's feedback to repair misunderstanding	

Learners thinking in KB-map with source connection
